

HOW TO UPDATE/CLEAR YOUR CACHE

Sometimes pictures and other website elements are updated. Remember to update your image cache to view the most up-to-date website elements (e.g., pictures, pdf files).

Two ways to accomplish this:

- (1) Hold down shift and press the refresh button on the browser
- (2) Manually reset your image cache (example using Google Chrome)
 - Your browser's image cache stores images to improve search engine experience

Under your browser's settings, click on "History" – then click on "Clear browsing history."

Check the "Cached images and files" checkbox. Click "Clear data." Once data is cleared, re-open the search engine: Up-to-date website elements will appear
